

WILDFIRES

and Community Health

**COME
DISCUSS
SOLUTIONS
WITH US!**

We are coming together as a community to talk about how fires in our towns affect our families' health. Protect yourself and your home from toxic residues in the air, water and soil caused by wildfire. Come together to learn and take action to protect health!

All presentations in English and Spanish.
*People who attend are entered into a raffle to receive an Emergency Go Bag (worth \$50!)

Air

Smoke can harm our lungs and hearts long after the smoke goes away.

Water

Chemicals that cause cancer can get into drinking water from scorched pipes and well heads.

Soil

Asbestos, lead, mercury, silica and other toxic chemicals can stay in soils and drift into the air we breathe.
